

Baclofen is a muscle relaxer and an antispasmodic agent.

Baclofen is used to treat muscle symptoms; such as spasm, pain and stiffness; caused by multiple sclerosis, spinal cord injuries, or other spinal cord disorders. It is given intrathecally (directly into the spinal cord) or orally (by mouth).

#### Important information

Do not use baclofen at a time when you need muscle tone for safe balance and movement during certain activities. Do not drive or operate heavy machinery until you know how baclofen affects you.

Commonly reported side effects of baclofen include: drowsiness. Other side effects include: asthenia, dizziness, headache, and nausea. See below for a comprehensive list of adverse effects.
